### **AN/PVS-14 Adj. Gain Single Battery Monocular with a Select Tube**

After a long wait, I am making available for the first time, the Single battery unit PVS-14 in a Northrop/Litton tube configuration. These units have been restricted for quite some time to military and LE units. I am very happy to finally offer these to you folks here!

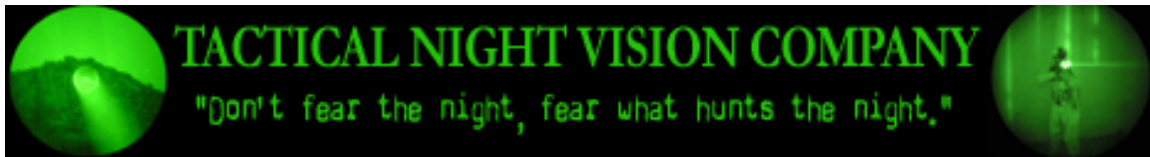

The single-battery configuration delivers the same features and versatility as the earlier PVS-14 dual-battery versions in a lighter weight monocular, providing greater mobility and comfort under normal operational conditions.

Some of the improvements over the dual battery configuration are,

- Lighter weight.
- Metal and tethered battery cap with dual inner and outer O-rings for a better seal.
- Machined brass interior battery housing.
- Beefed up and stronger lanyard lug attachment points
- Newly designed manual gain control knob.

The PVS-14 SB features Automatic Brightness Control and Bright Light Protection, as well as manually adjustable gain for urban environment Each AN/PVS-14 SB units come standard with the following accessories.

- Mil Spec headgear
- Head mount adapter J-Arm,
- Soft carrying case,
- Demist shield,
- Sac lens,
- Owners Manual
- Full 2-year warranty

If you want the absolute best I offer a Hand Select option for these Northrop/Litton tubes with a FULL certified data sheet! All image intensifiers have some imperfections. The combination of high performance and clean cosmetics is both rare and expensive (look at full mil.spec. tubes). The Hand Select tubes provide a superior alternative for your hard-earned money. All of these intensifiers offer high performance numbers and, while there are some cosmetic imperfections, they in no way debilitate in their use. Having considered the possibility that some of you are very picky perfectionists (myself included), I also offer these certified data sheeted Hand Select versions, which includes both very high specs and minimum to none imperfections. If your mission calls for the best, I can accommodate you. Price for this option is **\$295.00**.

I feel the PVS-14 monocular is the most versatile NV system out there to meet all your mission needs. Here are many of the added mission capabilities with this system

- Hand held spotting scope. The PVS can be used alone with optional magnification lenses, or attached to a daytime spotting scope with the optional universal adapter.
- Hands free mono-goggle (with the included headgear or optional helmet mount)
- Day/Night weapon sight (with the use of the optional weapon mount and EoTech, or attached to an existing rifle scope with the optional universal adapter)
- Surveillance and night-time photography (with the use of the optional camera adapter)

**(See all my NV accessories page for all the associated gear listed above)**
