

Item Number **HELMET-MOUNT-ADJ**

ADJUSTABLE HELMET MOUNT

Your Price \$98.00

This system allows the operator to mount almost any type of accessory to the MICH/ACH/PROTEC/BELL helmets without drilling any holes in the helmet and is designed to be used WITH (not incl) the PVS-14 night vision goggle and existing mount. The existing NVG front helmet mount is easily attached to the system and installed on the helmet with no drilling creating a streamlined and very efficient helmet mounting platform - WITH NO HOLES TO DRILL!

The system is excellent for mounting surefire flashlights with IR filters to provide a huge amount of additional lighting for the operator wearing night vision goggles. Ideal for CQB room clearing, search missions, and especially medical personnel who have to treat patients at night with white light or IR filtered light. This system eliminates or greatly reduces having additional people to hold flashlights on patients.

The main body webbing structure is fully adjustable to fit various types of helmets. Extra hook/loop is provided for attaching NVG gling tape, unit identifiers and/or American flag patches. Special rubberized webbing fastens entire systems securely to helmet.

Accessories such as flashlights, cameras, etc can be attached to two M1913 picatinny rail sections supplied on each side of the helmet. These hard points are adjustable and easily removable if not needed allowing you to position any item as needed. Use one or both hard points.
