Scope Accessory Ring Rail

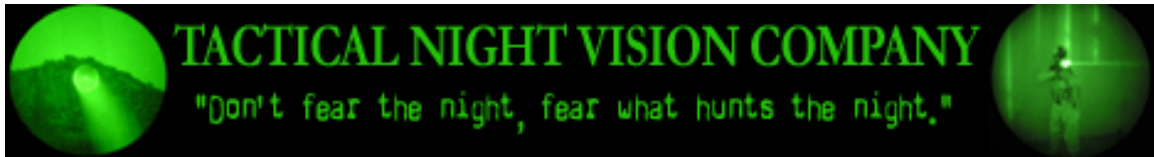

SAR 2

Over the last several years I've looked for simple solutions for my day and night vision mission needs that no one seemed to make. The first item was a simple picatinny tripod rail attachment I was making to mount surveillance gear for several years. This turned out to be a great success. The second item was a fixed beam IR Illuminator that was appropriately named "Da Torch". The follow on, Da Variable Beam Torch has been a huge success story with hundreds of units being sold in its first month of release! It's gone on to be my best seller so far in accessory gear.

The next critical mission item I've been prototyping over the last 2 years is a stand-alone high quality simple scope ring with a small rail affixed to the top of the ring. There are other products out there that do this, but these designs either fix the rail as a primary and stationary scope cap ring or were a very low quality ring/rail systems. In most cases, manufactures located this rail cap directly on top of their ring causing tall scope turret obstruction, which limits the scope one might want to use and also making elevation and windage adjustments to the dot optic were extremely difficult while mounted on the weapon. Some makers offset a permanent scope cap rail to the right or left (too far), which requires too much head movement to view an optical dot during critical times. Most of these rail caps also required you to purchase the manufactures scope ring in order for the other rail top cap to fit and/or a specific dot brand due to their base.

With that in mind, I embarked on this project with these requirements.

1. Ability to mount the entire ring and rail anywhere on the scope tube (mostly full size scopes).
2. Ability to mount the ring and rail at any angle I needed.
3. The scope ring rail also had to be short enough not to impede with the scope adjustments itself, but at that same time give me enough rail versatility to mount a host of small dot sights and IR illuminator devices for numerous mission call outs especially for bolt guns where no rail space exists on most platforms.
4. Lightweight, machined aluminum, hard anodized and able to withstand harsh recoil of firearms and ones bank account!

Well I am very happy to announce after 2 years of prototyping we came up with a design and found a manufacturing company to produce the SAR1, SAR2, SAR3 and SAR4. The SAR 1 is a 1" ring design, the SAR 3 is a 30mm design and the SAR4 is a 34mm design. The SAR 2 is not actually a scope ring, but a 5mm-11mm dovetail to picatinny rail attachment that eases the pain for you rimfire dovetail folks that have a need for a rail attachment. I've struggled with some awesome 22 rimfires and shotguns out there only to find out a picatinny type rail for my scopes and dot sights were virtually impossible to find for these dovetail receiver systems.

Specifications of the SAR Units

SAR1 = 1.1oz (1" Dia.)

SAR2 = 1.3oz (Dovetail to Picatinny Adapter)

SAR3 = 1.0oz (30mm Dia.)

SAR4 = 1.1oz (34mm Dia.)

The Doctor Optic on its own with its weaver mount comes in at 2.1oz

Price for the SAR 1, and 3's are **\$79.00ea** plus S/H.

Price for the SAR 2 is **\$69.00ea** plus S/H

Price for the SAR4's is **\$89.00ea** plus S/H

Of course I accept Visa, MC and Paypal, MO, Cashiers Checks and pesonal checks (with clearance) also gladly accepted. **(Dealer Inquiries Welcomed)**

I hope these units can helps those who need the versatility this ring may provide.

SARS Mounted with (top to bottom), Aimpoint Micro T1, Doctor Optics and RDP II
