D-740 Night Vision 4x Rifle Scope

Retail \$4049.00

Savings \$200.00

Your Price \$3849.00

D-740 line of precision NV riflescopes can't be beat. Standard features of the D-740 include a waterproof, Mil-Dot illuminated Red-on-Green reticule, high-grade multi-coated optics, and a low profile heavy-duty Picatinny rail mounting system. I can tell you this is the ONLY NV riflescope in the world that has this user selectable amber or red mil-dot reticule. I have found testing this unit that during long hours behind the scope, the amber reticule causes LESS eye fatigue. The color selection is located on the power switch and reticule intensity is also standard on these units. With guaranteed zero retention on heavy caliber weapons (including .50 BMG class), these are the systems of choice among Military and Law Enforcement professionals that have finally become available on the commercial market. I have personally demoed these units to numerous LE and Federal agencies. They are currently in use for clandestine operations in our high desert regions and have also been in use by our troops.

If you want the absolute best I offer Hand Select Tubes as well. All image intensifiers have some imperfections. The combination of high performance and clean cosmetics is both rare and expensive (look at full mil.spec. tubes). The Select tubes provide a superior alternative for your hard-earned money. All of these intensifiers offer high performance numbers and, while there are some cosmetic imperfections, they in no way debilitate in their use. Having considered the possibility that some of you are very picky perfectionists (myself included), I also offer the Hand Select version, which includes both very high specs and minimum to none imperfections. If your mission calls for the best, I can accommodate you. Price for this option is **\$295.00**.

In some of the through the tube NV pics below, you will see a slight shaded area running vertically. ANY rear-projection reticule riflescopes have a "darker" reticule-plate stripe. This is due to the coating on the etched plate to reflect red/amber light back towards the eyepiece. The 4x system will have a more pronounced reticule-plate due to lower magnification and a slightly higher overall brightness. This phenomenon is virtually undetectable with a naked eye (in opposition to a much more sensitive camera) and in no way impairs the performance. I wish our eyes could see in the dark this well!

D-740 (4x) Specifications

Maximum Recoil Rating - .375 H&H, .50 BMG and .416 Rigby

Image Intensifier - Generation 3 US

Resolution - 64-72 lp/mm

Magnification - 4x

Operating Temperature -40° F to 122° F -40°C to +50°C

Warranty - 2 years

Suggested Retail Price for the D-760 Select Alpha is **\$3849**.

Prices shown above do not include S/H and insurance. PayPal and CC please add the 3%. I also will accept Cashiers Check, and Money Orders. Of course I must state here, **NO SHIPPING OUTSIDE CONUS, EVER**. Shipped to verifiable US addresses **ONLY**.

Thanks again to all have ordered my NV products in the past. These scopes listed here are simply the best pound-for-pound units out there for reaching out and touching something! I've worked with these units for far too long to expect anything less and I've also worked with the **VERY** high dollar units as well. You will be **VERY** happy with either the 760 or 740 units.
